

One proof, two possibilities

Only a few steps to the digital COVID certificate

Download your EU digital COVID certificate directly to your smartphone with the free **CovPass-App** or the **Corona Warn App**. Show your full vaccination coverage or recovery via QR code if needed.

You will receive the QR code for the Corona vaccination after your vaccination in the vaccination centre, in the doctor's office or after presenting your yellow vaccination card and an identification document in the pharmacy. You can subsequently obtain the QR code as proof of a negative Corona test from participating test centres if required. For proof of recovery, please contact your family doctor.

Easy to use

You can save your EU COVID digital certificate on your smartphone with just one scan. The QR code for presentation appears in the app.

Local data storage

The data is only stored on your smartphone. You decide when and to whom you show your information.

Data minimisation and data security

The QR code contains the mandatory minimum data set according to EU regulations. This is secured with a signature that prevents forgery.

Compatible from iOS version 12 and Android version 6

This is how it works

Show your EU COVID digital certificate with the CovPass-App or with the Corona alert App.

1. Transfer the EU COVID digital certificate to the smartphone

Download the CovPass-App or the Corona Warn App on your smartphone and open the app. Now hold the camera of your smartphone over the QR code and scan the EU digital COVID certificate with the CovPass-App. The certificate will be downloaded to your smartphone together with the QR code.

 You can get the EU digital COVID vaccination certificate directly after vaccination at the vaccination centre or doctor's office, or afterwards at most pharmacies. You can only get the certificate for recovery in doctor's offices.

2. The CovPass-App or the Corona Warn App displays the QR code

You can use the QR code to prove that you have a valid EU vaccination or convalescence certificate. After scanning, the current QR code is displayed directly in the CovPass-App. When the QR code is checked, only the status of the certificate, the name and the date of birth are displayed.

 The QR code for full vaccination protection is only valid two weeks after the last vaccination. This is because sufficient effectiveness of the vaccination protection only occurs after the two weeks have elapsed.

3. Show the QR code if needed

Have the QR code in the CovPass-App scanned by the examiner. Please have your identification document or the identification document of the vaccinated, tested or recovered person ready.
