

Issue vaccination certificates digitally

The Vaccination Certificate Service is a web application for vaccination centres, medical practices and pharmacies. It allows authorised persons to issue a vaccination certificate for the Corona vaccination. The digital vaccination certificate is thus securely transmitted to the vaccinated person.

Easy to use

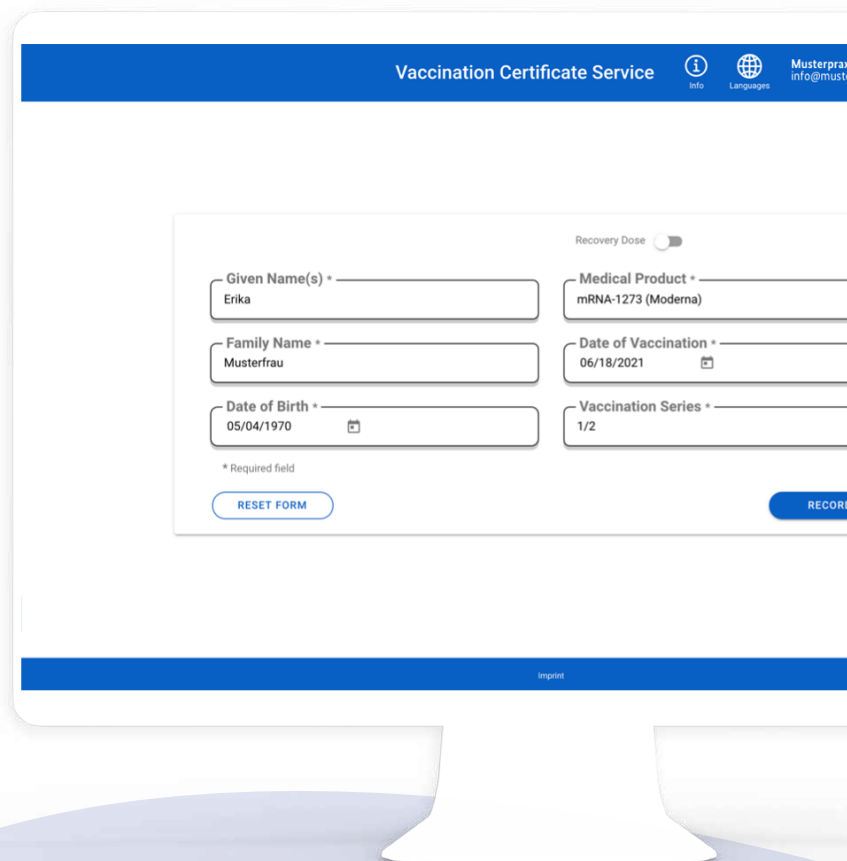

With the Vaccination Certificate Service, you can create EU-wide valid vaccination certificates for the Corona vaccination and recovery certificates without much effort.

Free of charge

The use of the web application for medical practices and vaccination centres is free of charge.

Data minimisation and data security

The Vaccination Certificate Service contains the mandatory minimum data set according to EU regulations. This is secured with a signature that prevents forgery.

The screenshot shows the web application interface for the Vaccination Certificate Service. The header includes the service name, an information icon, a language selector, and contact information for 'Musterpraxis info@musterpraxis.de'. The main form contains several input fields: 'Given Name(s) *' with the value 'Erika', 'Family Name *' with 'Musterfrau', 'Date of Birth *' with '05/04/1970', 'Medical Product *' with 'mRNA-1273 (Moderna)', 'Date of Vaccination *' with '06/18/2021', and 'Vaccination Series *' with '1/2'. There is a 'Recovery Dose' toggle switch. At the bottom of the form are 'RESET FORM' and 'RECORD' buttons. A footer bar contains the word 'Impressum'.

This is how it works

1. Log in to the Vaccination Certificate Service

You will receive the access data for the vaccination certificate service from the IT managers of your medical facility. Log in to the web application with your access data. To log in with the FIDO2 USB stick: After logging in, insert the USB stick into the port on the computer and tap on the USB stick.

2. Document the vaccination status

After registering once, simply enter the first name(s), surname, and date of birth of the vaccinated person in the online form. Then select the corresponding data of the vaccination carried out. The vaccination certificate can now be generated with a click.

3. Hand over the vaccination certificate

The vaccination certificate can be printed out and given to the vaccinated person. It contains a QR code. This can be scanned by the vaccinated person with the CovPass-App – either from the printed vaccination certificate or directly from the screen if required.
